Upper Control Arm Installation

1 *Gain Access to Undercarriage*

The easiest way to work on strut rods is to have the suspension at ride height. Use a 4-post/alignment lift or floor ramps to gain access to the front undercarriage. Chock the rear wheels to keep the car from rolling.

Unbolt the strut rod from the lower control arm. There are two bolts per side. Keep the steering stop bracket and hardware for the reinstallation.

4 *Remove "Ring" from Front Mount*

From factory, there is a metal ring that is formed around the inner edge of the front mount bracket hole. In many cases, this ring is deteriorated or has fallen out from

years of use. It is imperative to remove this ring if it's still installed to insure the hotchkis struts are seated properly in the car.

Use a chisel and hammer to knock the edges inward. Eventually the ring will either crack or pop out. Clean the surface on both sides of the hole to insure you have a flat surface.

5 *Prepare the Hotchkis Strut Rod*

Assemble the Hotchkis strut rod as shown in the diagram below. Adjust the turnbuckle sleeve and/or other components so you have .438" or 7/16" of thread showing on both the heim joint and the strut rod threads. This will simulate stock length for now.

6 *Install the Front Mount*

The front mount consists of a forward spacer, inner spacer, and rearward spacer in conjunction with our unique machined clevis mount. Install the rearward spacer onto the clevis mount. The rearward spacer is the thinner(.188") of the two large diameter spacers. Next Install the strut assembly onto the car. Insert the inner spacer onto the front mount on the chassis. Place the forward spacer (.250") on the clevis stud and follow up with the nylock nut. Tighten the nut, making sure the clevis is clocked correctly, being squared up with the chassis mount.

- 7 *Install Lower Control Arm Mount*
Reuse the original steering stop and hardware. Tighten up the two bolts and you are done.

Perform Alignment
Perform a front end alignment. The Hotchkis strut rods can add up to 4° of positive caster (possibly more if equipped with spherical bearings in lower control arms). In any case, make sure the lower control arm bushings are in good condition.
